

Providian Financial Building (re-pipe)

This re-piping project is located at 201 Mission St., San Francisco, CA. Shurjoint grooved fittings and valves were selected for their quality, availability, and ease of installation, which minimized the construction time to replace condensers, chillers, pumps, and associated piping.

Shurjoint grooved products (up to 14") were used on this project's chilled/condensed water supply system.
