

Sharjah International Airport Expansion

Sharjah International Airport is located in Sharjah, United Arab Emirates. It is an important cargo airport and home base of the low- cost carrier Air Arabia. The expansion project started in Jan. 2005 and was completed in July 2006. When the expansion was completed, the Sharjah International Airport became four times bigger than it originally was.

Shurjoint was specified for the HVAC system. Besides the fact that the product quality meets the high standard requirements of the contractor, the grooved system can be installed in small spaces, and all pipes can be grooved at the shops by experienced technicians instead of at job site. Also, the grooved design permits the system to be flexible and forgiving, and can handle the expansion or contraction of the pipe-line under extreme weather conditions.
