

# IMC Regional Medical Center

Intermountain Healthcare is a nonprofit system of hospitals, surgery centers, clinics, homecare & hospice providers that serves the medical needs of Utah and southeastern Idaho. Shurjoint Roll Grooved Copper Couplings & Fittings were utilized by the piping contractor, reducing installation time and expense of the Domestic Water Service. Type "L" copper is easily grooved, installed without heat, and is easy to retrofit and maintain. Fittings are lead-free "G" bronze castings, per ASTM B-584 copper alloy C90500.

The carbon steel Hydronic Piping was constructed with Shurjoint couplings, fittings and flow-control components in 2" – 14" sizes. Flexible couplings were used at the pumps to attenuate noise and vibration, as well as to align piping runs with equipment nozzles.

## location

Salt Lake City, UT, USA

## year

2007

## application

Domestic Hot & Cold Water /  
Hydronic Piping

## productline

VSH Shurjoint
